AB A process for synthesizing 4-methylene-L-glutamic acid and analogs comprises converting (2S)-pyroglutamic acid or a derivative to a 4-enamine derivative, hydrolysis to a 4-hydroxymethylene derivative, reduction to a 4-methylene derivative, and treatment with strong base to effect ring cleavage. In the examples, L-pyroglutamic acid was C/N-protected and reacted with DMF diisopropyl acetal to form intermediate Et 4-[(dimethylamino)methylene]-N-(tert-butoxycarbonyl)-L-pyroglutamate, which was converted into 4-methylene-L-glutamic acid hydrochloride.

AB Title compds. L-NHCH(CO₂H)CH₂C(CO₂H):CH₂ and cyclopropyl analog I were obtained from protected pyroglutamate Boc-pGlu-OEt (Boc = Me₃CO₂C) in 2 and 3 steps, resp. Key methylenepyroglutamate intermediate II was prepared by reaction of the protected pyroglutamate lithium lactam enolate with Eschenmoser's salt. Cyclopropyl derivative I was also prepared from imidazolidone III (R = H) in 3 steps. The intermediate III [R = CH₂C(CO₂Bu):CH₂] was obtained by diastereoselective reaction of the lithium enolate of III (R = H) with Bu (2-tosylmethyl)acrylate.
